March 22, 2021

Mr. Doug Ferguson  
On-Scene Coordinator  
U.S. Environmental Protection Agency, Region 7  
11201 Renner Boulevard  
Lenexa, Kansas 66219

**Subject:** Emergency Response Trip Report  
AltEn Facility Release – Mead, Nebraska  
U.S. EPA Region 7 START 5, Contract No. 68HE0719D0001  
Task Order No. 19F0027.015  
**Task Monitor:** Doug Ferguson, On-Scene Coordinator

Dear Mr. Ferguson:

Tetra Tech, Inc. submits the attached Emergency Response Trip Report regarding the AltEn site in Mead, Nebraska, where release of liquid waste products from an aboveground tank occurred. If you have any questions or comments, please contact Project Manager Eric Deselich at (816) 412-1750.

Sincerely,

A handwritten signature in black ink, appearing to read "Eric Deselich".

Eric Deselich  
START Project Manager

A handwritten signature in black ink, appearing to read "Ted Faile".

Ted Faile, PG, CHMM  
START Program Manager

## **1.0 INCIDENT DESCRIPTION**

On February 13, 2021, the U.S. Environmental Protection Agency (EPA) Region 7 Superfund Division tasked Tetra Tech, Inc. (Tetra Tech), under Superfund Technical Assessment and Response Team (START) 5 Contract No. 68HE0719D0001, Task Order 19F0027.015, to provide technical support for an emergency response (ER) at the AltEn ethanol production facility (the site) at 1344 County Road 10 in Mead, Nebraska. Facility representatives reported release of an unknown quantity of stillage (waste remaining after ethanol distillation) mixed with animal manure liquid from a large aboveground digester tank at the site. Reportedly, the release resulted from burst of a frozen sub-surface pipe at the base of the tank in the early morning hours of February 12, 2021.

Primary goals of the ER were to: (1) assist with overall site assessment, including investigation of the surrounding area, to determine the trajectory and extent of the release; (2) assist air quality monitoring to detect presence of contaminants and possible migration of air contaminants to local communities; and (3) aid collection of soil and water samples to identify potentially hazardous substances present in released materials.

## **2.0 PROPERTY LOCATION AND DESCRIPTION**

The site, at 1344 County Road 10, hosts an active ethanol facility that utilizes treated (i.e., fungicides, pesticides) corn seed in the production process. The site includes two aboveground ethanol tanks, two digester tanks, and one tank of natural gasoline used as denaturant (see Appendix A, Figure 2). The site is bounded north by farm fields, two large lagoons containing waste, and County Road K. East of the production facility are smaller ponds/lagoons and open fields adjacent to County Road 9. The site is bounded south by eight 20-acre livestock enclosures managed by the Mead Cattle Company LLC. The main facility entrance is on County Road 10, the west boundary of the site. The site and neighboring livestock operation are traversed by a grid of access roads and interconnect ditches that generally drain southeast toward County Road 9. Geographic coordinates at the site's main entrance are 41.195007 degrees north latitude (lat) and -96.483582 degrees west longitude (long). Coordinates at the spill location are 41.195358 degrees lat and -96.476611 degrees long.

The facility has a history compliance issues, and had undergone 36 inspections in 2020 by Nebraska Department of Environment and Energy (NDEE). NDEE officials reported that recent inspections had resulted in issuances of dozens of violations and non-compliance orders. On February 8, 2021, NDEE ordered the facility temporarily shut down (4 days before the accidental release of stillage and manure liquid). See NDEE Director's public comments at: <https://www.ketv.com/article/senators-seek-answers-on-mead-ethanol-leak/35637986>.

At the time of the ER, the site was covered in 2 to 4 inches of snow with drifts of 2 to 3 feet at some locations. Upon START's arrival, EPA Federal On-Scene Coordinator (FOSC) Doug Ferguson and State On-Scene Coordinator (SOSC) Kirk Morrow of NDEE were meeting with representatives of AltEn facility, the potentially responsible party (PRP), to prepare for site assessment activities. Two dams had been constructed along the spill's flow path, and clean-up contractors were observed moving pumps and stringing 4-inch hose between a dammed location and the southernmost retention pond. The temperature was approximately 3 degrees Fahrenheit at 1650 hours as site assessment activities began.

### **3.0 EMERGENCY RESPONSE ACTIVITIES**

During the response, START documented ER activities in a site logbook (see Appendix C). In addition, EPA and START photo-documented progress of site activities (see Appendix B). The following sections discuss response activities by EPA and/or START during the ER on February 13-14, 2021.

#### **3.1 MOBILIZATION ACTIVITIES**

At approximately 0900 hours on February 13, 2021, START received an alert from EPA informing START Project Manager (PM) Eric Deselich about some details of the release. START PM Deselich alerted START Member (SM) Ryan Slanczka of the developing incident, and subsequently (at 0951 hours) received a request from EPA to mobilize to the site. START contacted EPA FOSC Doug Ferguson to discuss equipment needs, obtain additional information pertinent to the ER, and coordinate deployment activities. START gathered appropriate equipment/supplies at the EPA Region 7 Training and Logistics Center and START office/garage for the response, and departed the Kansas City area at 1300 hours. START arrived at the site at 1640 hours and met EPA FOSC Doug Ferguson and SOSC Kirk Morrow in the parking lot of the facility's offices to discuss response activities.

#### **3.2 ON-SITE ASSESSMENT**

START, EPA, and NDEE loaded into separate vehicles at 1650 hours and were led by the PRP to a dam constructed of bio-char totes (lat/long: 41.1957501/-96.4716557) approximately 550 meters east of the damaged digester tank. START initiated air monitoring for contaminants consistent with the types of waste reportedly released—including volatile organic compounds (VOC), ammonia, and hydrogen sulfide. Each of three air monitors failed to register stable measurements, rapidly fluctuating and then displaying unintelligible readings. Presumably, air monitoring difficulties were due to low-temperature conditions. Air monitoring activities were discontinued as water and soil samples were collected. The group then moved to the damaged tank (lat/long: 41.1953694/-96.4767279) where START collected water and soil samples.

#### **3.3 OFF-SITE ASSESSMENT (February 13, 2021)**

On February 13, 2021, START, EPA, and NDEE mobilized to a second dam near the intersection of County Road 9 and County Road J at the southeast corner of the site (lat/long: 41.1862846/-96.46387) identified in State records as property of the Mead Cattle Company. The PRP's contractor personnel had constructed the dam of loose soil, and one of those personnel was present as EPA, NDEE, and START arrived. After a short conversation between EPA and the contractor, EPA and NDEE examined the dam

as START collected water and soil samples at the northwest side of the dam (lat/long: 41.1862846/-96.46387). START, EPA, and NDEE then mobilized approximately 1.6 miles southeast to a stream crossing on County Road 8 for collection of additional water and soil samples.

### **3.4 OFF-SITE ASSESSMENT (February 14, 2021)**

Off-site assessment activities continued February 14, 2021, with EPA and START investigating another downgradient stream crossing for appropriate locations to sample. Several locations were identified for investigation; however, roads necessary to access two stream crossings were impassable due to drifting snow. Ultimately, EPA and START moved southeast downgradient and met with the PRP at 0900 hours to assess a location along State Highway 66 for construction of a third dam. EPA and PRP discussed dam construction options while START collected water samples. Surface water at this location (lat/long: 41.1385839/-96.4257193) was visibly clearer than at the upgradient location where sampling had occurred during the previous day. EPA and START then moved north (upgradient) on State Highway 66 to the last assessment location where water samples were collected. Outside temperatures ranged from -5 to -2 degrees Fahrenheit during off-site assessment activities.

### **3.5 POST-ASSESSMENT MEETING**

EPA, START, and PRP staff met on site at the PRP's office at 0905 hours on February 14, 2021, to discuss clean-up actions and prevention of additional accidental releases at the facility. Specifically, EPA FOSC Doug Ferguson conveyed the importance of preventing a similar release from a second on-site digester tank. The PRP described certain steps necessary to prevent another accidental release from the second digester tank. Additionally, the group reached consensus on construction of a dam at the culvert along State Highway 66 where the group had met that morning. The group discussed several other aspects of clean-up operations, including sampling that the PRP could conduct for its own use, and responsibilities for oversight of pending clean-up activities. PRP representatives agreed to provide a spill prevention plan and response plan for the clean-up to EPA FOSC Doug Ferguson by February 19, 2021. The meeting concluded at 1046 hours. Immediately afterward, meeting attendees moved in separate vehicles to a nearby on-site location to inspect an aboveground storage tank containing natural gasoline used to denature ethanol.

### **3.6 DEMOBILIZATION ACTIVITIES**

START and EPA departed the site at 1050 hours and subsequently met off site in a parking lot at 999 County Road M to debrief the incident and discuss post-response activities. At conclusion of the meeting, START was instructed to demobilize, and departed for Kansas City at 1147 hours.

#### 4.0 LABORATORY ANALYTICAL PARAMETERS

On February 15, 2021, START delivered samples collected during the ER to Pace Analytical Services, LLC (Pace) in Lenexa, Kansas. Based on the facility's regular use of treated seed grain for ethanol production, START coordinated with EPA to identify analytical parameters consistent with known treatments for seed corn and other seed grains. Samples were analyzed at three laboratories, including one laboratory outside Pace's network, for the following parameters via associated analytical methods:

- pH via Methods 9045 and 4500-H+B (electrometric)
- VOCs via Method 5030B/8260
- Ammonia (nitrogen) and ammonium (ion, dissolved) via Method 350.1
- Sulfide, total dissolved via Method 4500-S-2 B,C,D
- **Chlorpyrifos** (organophosphorus pesticide [OP]) via Method OP 8141B
- Carbon disulfide via Method 630.1 (gas chromatography [GC] – flame photometric detector [FPD])
- Fungicides and similar analytes of interest via Methods 8270D (GC – mass spectrometry [MS]/MS), 8321B (liquid chromatography [LC] – MS/MS), and JAOAC, Vol. 78, #5 (GC-FPD):  
**Abamectin**, azoxystrobin, **captan**, **carbendazim**, carbon disulfide, carboxin, chlorantraniliprole, **clothianidin**, cyantraniliprole, difenoconazole, fludioxonil, fluoxastrobin, **imidacloprid**, mancozeb, mefenoxam, metconazole, picoxystrobin, propiconazole, prothioconazole, pyraclostrobin, tebuconazole, thiabendazole, **thiamethoxam**, thiophanate methyl, **thiram**, and trifloxystrobin.

**Note:** EPA identified analytes listed in bold font above as priority parameters (analytes).

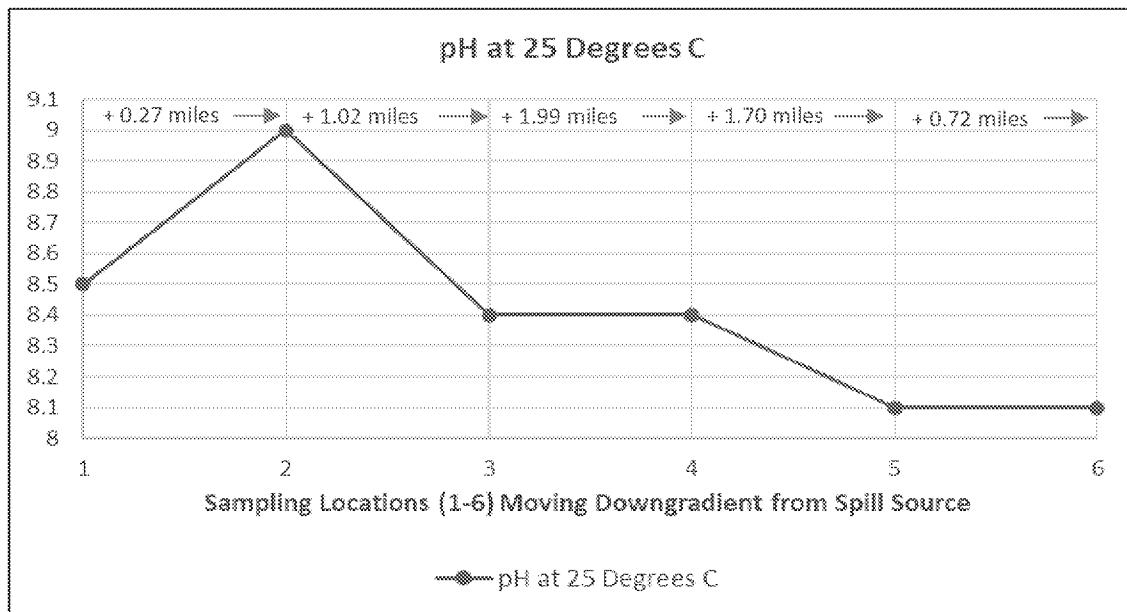

On February 18, 2021, Pace's Lenexa laboratory conveyed preliminary results for pH, VOCs, ammonia, ammonium, and total dissolved sulfides. On February 22, 2021, results for OP pesticides came from Pace's laboratory in Mount Juliet, Tennessee. On February 26, 2021, results for fungicides and other analytes of interest arrived from Pace's Pacific Agriculture Laboratory.

Before submitting samples to Pace, START had requested that a revised results package include all Quality Assurance/Quality Control (QA/QC) data for the purpose of developing a Level II Data Validation Report (DVR). The data package is in Appendix D1, although the Level II DVR had not been completed at the time of this report. The DVR will be appended to this report and submitted to EPA when completed by START.

## 5.0 SUMMARY LABORATORY ANALYTICAL RESULTS

**pH Analytical Results.** Laboratory results (Figure 1 and Table 1) generally indicate a drop in pH of surface water with movement of sample locations downgradient from the spill source (digester tank). Over 5.7 miles and six sample locations, pH of sampled water decreased slightly by 0.4 standard units. However, pH significantly increased at Sample Location #2, where a dam of bio-char totes had been constructed. Samples were collected at the downgradient side of the dam where water pH may have been altered by damming materials.

**Figure 1: pH Analytical Results**

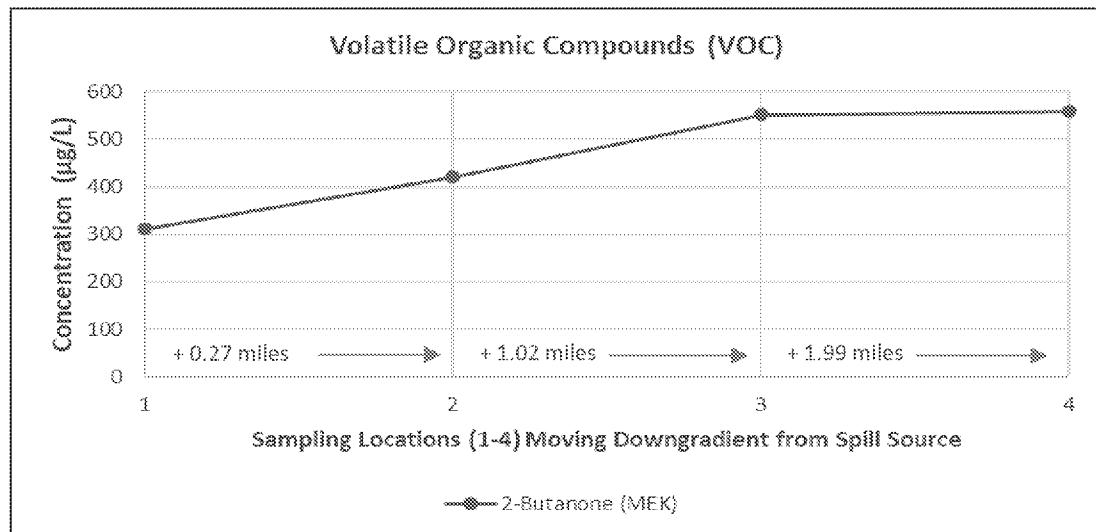

**Table 1: pH Analytical Results**

Sample Location	Collection Date	Matrix	Sample Identification	Result (standard units)
1	2/13/2021	Water	2	8.5
2	2/13/2021	Water	1	9.0
2	2/13/2021	Solid	1S	9.0
3	2/13/2021	Water	3	8.4
4	2/13/2021	Water	5	8.4
5	2/14/2021	Water	6	8.1
6	2/14/2021	Water	4	8.1

**VOC Analytical Results.** Preserved water samples were collected at the four locations for VOC analysis, including surface water at the digester tank and the next three sample locations. Moving downgradient along this 3.3-mile segment of the spill path, lab results (Figure 2 and Table 2) indicate that of 63 VOCs analyzed, only methyl ethyl ketone (MEK) was present at levels above the practical

quantitation limit (PQL) in each of the four water samples. Preserved samples for VOC analysis were not collected at two sites farther downgradient due to ice in surface water.

**Figure 2: VOC Analytical Results**

**Table 2: VOC Analytical Results**

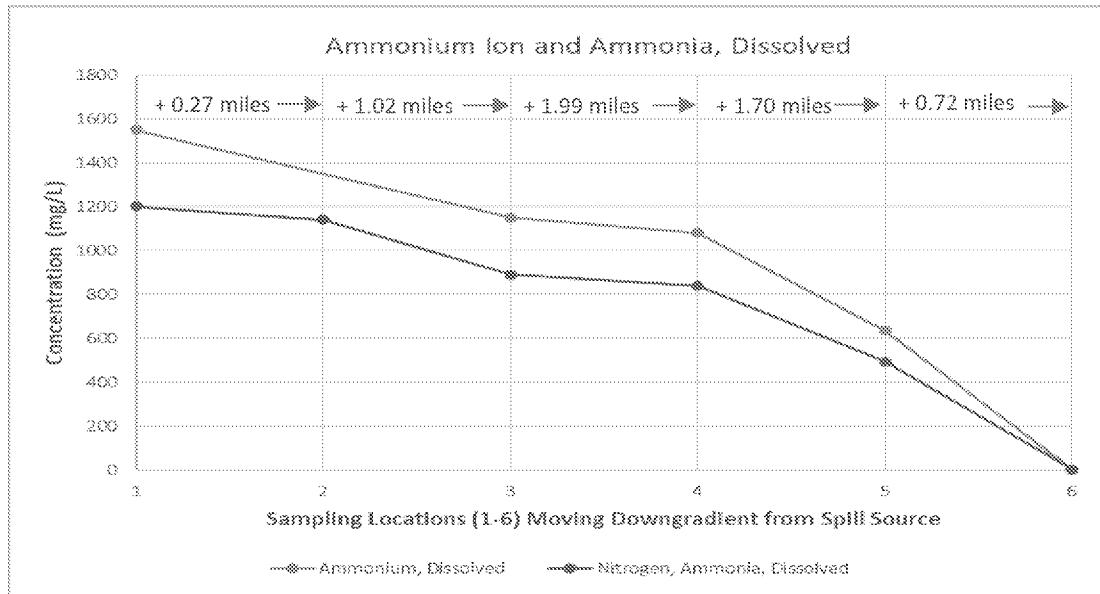

Sample Location	Collection Date	Matrix	Sample ID	VOC Parameter	Result ( $\mu\text{g/L}$ )
1	2/13/2021	Water	2A	MEK	311
2	2/13/2021	Water	1A	MEK	420
3	2/13/2021	Water	3A	MEK	551
4	2/13/2021	Water	5A	MEK	558

Notes:

**Ammonium/Ammonia Analytical Results.** Lab results (Figure 3 and Table 3) indicate that ammonium ion ( $\text{NH}_4^+$ ) and ammonia ( $\text{NH}_3$ ) were present at comparable levels at each sampling location along the spill path, with concentrations decreasing inversely with distance from the spill source.

**Figure 3: Ammonium/Ammonia Analytical Results**

**Table 3: Ammonium/Ammonia Analytical Results**

Sample Location	Collection Date	Matrix	Sample ID	Parameter	Result (mg/L)
1	02/13/2021	Water	2	Ammonium	1550

**Pesticide Analytical Results.** Chlorpyrifos, an OP pesticide and long-standing seed treatment, was identified as a priority parameter for analysis. Water and soil sampled were collected at the three locations nearest the spill source (Sample Locations 1, 2, and 3). However, only water samples were collected at the three locations most distant from the spill source (Sample Locations 4, 5, and 6). Laboratory results indicate no detection of Chlorpyrifos in water (six samples) and soil (three samples) at six locations along the spill path.

**Fungicide and Similar Analyte Analytical Results.** Samples from each location were analyzed for 27 substances commonly used as fungicides in agriculture activities, although several of these analytes are used for multiple purposes. Of the 27 parameters analyzed, 11 fungicides and similar analytes were detected at various concentrations in samples collected along the spill path. Among the 11 substances detected, laboratory results indicated presence of three priority parameters (analytes) in samples: abamectin, clothianidin, and thiamethoxam. Figures 5 through 7 on the following pages illustrate analyte

concentrations at each sampling location. Companion Tables 5 through 7 list analyte concentrations reported in laboratory results.

ND Not detected

Presence of the following fungicides and similar analytes of interest was not detected during laboratory analysis of water and soil samples: captan, carbendazim, carboxin, imidacloprid, mancozeb, metconazole, picoxystrobin, propiconazole, pyraclostrobin, thiophanate methyl, thiram, and trifloxystrobin.

## **6.0 SUMMARY**

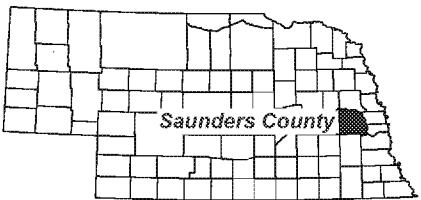

On February 13, 2021, EPA Region 7 Superfund Division tasked Tetra Tech START, under the START 5 contract, to provide technical support for an emergency response at the site. At the site, an unknown quantity of stillage mixed with animal manure liquid had been released from a large aboveground digester tank. The release resulted from burst of a frozen sub-surface pipe at the tank in the early morning hours of the previous day. During the response, START and EPA worked with NDEE to assess the site, investigate the extent of the release, collect water and soil samples, and coordinate with the PRP on near-term clean-up actions. START's response concluded on February 14, 2021, at about 1200 hours.

	PHOTOGRAPHER	FOSC Doug Ferguson	

**AltEn Facility Release**  
**Mead, Nebraska**

TETRA TECH PROJECT NO. X903019F0027.015  DIRECTION: Southeast	DESCRIPTION	This photograph shows a dam that had been constructed of bio-char totes about 550 meters east of the damaged tank. Product was observed running through and around the totes. Livestock enclosures are shown in the background. This is Sample Location #2.	3  DATE 02/13/2021
	CLIENT	Environmental Protection Agency - Region 7	
	PHOTOGRAPHER	Eric Deselich	

TETRA TECH PROJECT NO. X903019F0027.015  DIRECTION: Northeast	DESCRIPTION	This photograph shows Sample Location #2 at the downgradient side of the dam where product was actively flowing through the bio-char totes.	4  DATE 02/13/2021
	CLIENT	Environmental Protection Agency - Region 7	
	PHOTOGRAPHER	SOSC Kirk Morrow	

**AltEn Facility Release  
Mead, Nebraska**

TETRA TECH PROJECT NO. X903019F0027.015  DIRECTION: Northwest	DESCRIPTION	This photograph shows Sample Location #3 where product pooled at the upgradient side of a second dam constructed of soil near the intersection of County Road J and County Road 9.	5
	CLIENT	Environmental Protection Agency - Region 7	DATE 02/13/2021
	PHOTOGRAPHER	FOSC Doug Ferguson	

TETRA TECH PROJECT NO. X903019F0027.015  DIRECTION: East	DESCRIPTION	This photo shows Sample Location #5 along County Road 8 about 1.6 miles downgradient of the earthen dam. The unnamed stream was noticeably wider and deeper here than at other sample locations.	6
	CLIENT	Environmental Protection Agency - Region 7	DATE 02/13/2021
	PHOTOGRAPHER	FOSC Doug Ferguson	

**AltEn Facility Release  
Mead, Nebraska**

TETRA TECH PROJECT NO. X903019F0027.015  DIRECTION: Southwest	DESCRIPTION	This photograph shows Sample Location #6 at a culvert on State Highway 66. The unnamed stream flows directly south from this point and is shown partially obstructed by drifting snow.	5
	CLIENT	Environmental Protection Agency - Region 7	DATE 02/14/2021
	PHOTOGRAPHER	FOSC Doug Ferguson	

TETRA TECH PROJECT NO. X903019F0027.015  DIRECTION: West	DESCRIPTION	This photo shows Sample Location #4 along State Highway 66, downgradient of all other accessed locations. Water was visibly clearer here, and this was identified as a location to construct a third dam.	6
	CLIENT	Environmental Protection Agency - Region 7	DATE 02/14/2021
	PHOTOGRAPHER	Eric Deselich

**APPENDIX D1**  
**LABORATORY RESULTS**

February 26, 2021

Eric Deselich  
Tetra Tech EMI  
415 Oak St  
Kansas City, MO 64106

RE: Project: 68HE0719F0027.015  
Pace Project No.: 60361311

Dear Eric Deselich:

Enclosed are the analytical results for sample(s) received by the laboratory on February 15, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

Some analyses were subcontracted outside of the Pace Network. The test report from the external subcontractor is attached to this report in its entirety.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nolie Wood  
nolie.wood@pacelabs.com

## QUALIFIERS

Project: 68HE0719F0027.015  
Pace Project No.: 60361311

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
ND - Not Detected at or above adjusted reporting limit.  
TNTC - Too Numerous To Count  
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit.  
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute.

### SAMPLE QUALIFIERS

Sample: 60361311001

[1] OP Pesticides by Method 8141B - Sample produced heavy emulsion during Extraction process, low surr/spike recoveries due to matrix

Sample: 60361311006

[1] OP Pesticides by Method 8141B - Sample produced medium emulsion during Extraction process, low surr/spike recoveries due to matrix

Sample: 60361311016

[1] OP Pesticides by Method 8141B - Sample produced medium emulsion during Extraction process, low surr/spike recoveries due to matrix

Sample: 60361311019

[1] OP Pesticides by Method 8141B - Sample produced medium emulsion during Extraction process, low surr/spike recoveries due to matrix

Sample: 60361311021

[1] OP Pesticides by Method 8141B - Sample produced medium emulsion during Extraction process, low surr/spike recoveries due to matrix

### BATCH QUALIFIERS

Batch: 704583

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

### ANALYTE QUALIFIERS

C4 Sample container did not meet EPA or method requirements.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

without the written consent of Pace Analytical Services, LLC.

## QUALIFIERS

Project: 68HE0719F0027.015

Pace Project No.: 60361311

---

### ANALYTE QUALIFIERS

- F1 The sample was analyzed at a dilution due to foaming of the sample in the purge vessel.
- H6 Analysis initiated outside of the 15 minute EPA required holding time.
- HS Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).
- L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
- R1 RPD value was outside control limits.
- SR Surrogate recovery was below laboratory control limits. Results may be biased low.
- ST Surrogate recovery was above laboratory control limits. Results may be biased high.
- pH Post-analysis pH measurement indicates insufficient VOA sample preservation.

## Sample Receiving Non-Conformance Form (NCF)

Date: 2/15/21	Evaluated by: <i>Sheri R</i>
Client: Tetra Tech	

**Affix Workorder/Login Label Here or List Pace Workorder Number or MTJL Log-in Number Here**

**1. If Chain-of-Custody (COC) is not received:** contact client and if necessary, fill out a COC and indicate that it was filled out by lab personnel. Note issues on this NCF.

**2. If COC is incomplete, check applicable issues below and add details where appropriate:**

Collection date/time missing or incorrect	Analyses or analytes: missing or clarification needed	X	Samples listed on COC do not match samples received (missing, additional, etc.)
Sample IDs on COC do not match sample labels	Required trip blanks were not received		Required signatures are missing

**Comments/Details/Other Issues not listed above:**

*Recd Sample 3 not listed on COC - Collection Date & time not on label.*

**3. Sample integrity issues: check applicable issues below and add details where appropriate:**

Samples: Past holding time	Samples: Condition needs to be brought to lab personnel's attention (details below)	Preservation: Improper
Samples: Not field filtered	Containers: Broken or compromised	Temperature: not within acceptance criteria (typically 0-6C)
Samples: Insufficient volume received	Containers: Incorrect	Temperature: Samples arrived frozen
Samples: Cooler damaged or compromised	Custody Seals: Missing or compromised on samples, trip blanks or coolers	Vials received with improper headspace
Samples: contain chlorine or sulfides	Packing Material: Insufficient/Improper	Other:

**Comments/Details:**

**4. If Samples not preserved properly and Sample Receiving adjusts pH, add details below:**

Sample ID:	Date/Time:	Amount/type pres added:
Preserved by:	Initial and Final pH:	Lot # of pres added:
Sample ID:	Date/Time:	Amount/type pres added:
Preserved by:	Initial and Final pH:	Lot # of pres added:

ED\_006145\_00000421-00067

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

**Results Disclaimer -** Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

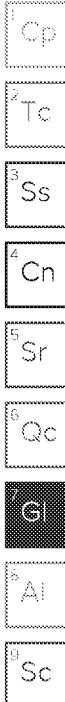

### Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

### Qualifier

### Description

J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J3	The associated batch QC was outside the established quality control range for precision.

# ACCREDITATIONS & LOCATIONS

ONE LAB. NATIONWIDE.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.

\* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

\* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

## Analytical Report

Client Sample ID: 6A  
Matrix: water

PAL Sample ID: P210195-09  
Sample Date: 2/14/21  
Received Date: 2/23/21

Extraction Date	Analysis Date	Analyte	Amount Detected	Limit of Quantitation	Notes
-----------------	---------------	---------	-----------------	-----------------------	-------

**Method:** Modified EPA 630.1 (GC-FPD)

2/25/21	2/25/21	Mancozeb	ND	10 ug/L
2/25/21	2/25/21	Thiram	ND	10 ug/L

**Method:** Modified EPA 8270D (GC-MS/MS)

2/25/21	2/25/21	Captan	ND	200 ug/L
2/25/21	2/25/21	Fludioxonil	30 ug/L	10 ug/L
2/25/21	2/25/21	Mefenoxam	45 ug/L	10 ug/L

Surrogate Recovery: 92 %

Surrogate Recovery Range: 52-149  
(TPP-d15 used as Surrogate)

**Method:** Modified EPA 8321B (LC-MS/MS)

Lenexa, KS 66219

**Report Number:** P210195**Report Date:** February 26, 2021**Client Project ID:** 60361311**Matrix Spike Data****Matrix:** soil

Extraction Date	Analysis Date	Batch QC Sample #	Analyte	% Recovery	Expected % Recovery	Notes
2/24/21	2/24/21	21B2407-MS1	Carbon Disulfide	148	52-162	
2/24/21	2/24/21	21B2407-MSD1	Carbon Disulfide	137	52-162	

**Analyte Information**

Method: JAOAC Method, Vol. 78, #5 (GC-FPD)

This is a presumptive method for thiocarbamates. Residues are identified as carbon disulfide.

Method: Modified EPA 630.1 (GC-FPD)

This is a presumptive method for thiocarbamates. Residues are identified as carbon disulfide.

**Project Notes****Notes      Definition**

- R4      Spike recovery outside of control limits due to high levels of target analyte present in the native sample.  
R3      Spike recovery above control limit. Sample results are not detected, data quality has not been affected.  
R1      Spike recovery is outside of control limits.  
I1      Unable to calculate recovery due to high levels of target analyte present in the native sample.  
E      Estimated value

Rick Jordan, Laboratory Director
